                                                                                                                 The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkth coded for by plasmid phA352. The hmb gene fragment was taken from pRAP504 and starts at the codon for the 33 rd amino acid residue of ORF1. The haemin binding protein can be used in vaccines for preventing or treating H. sommus infections, which cause thromboembolic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The hmb gene encoding the haemin-binding protein was expressed in E. coli as a fusion to the Pasteurella haemolytica leukotoxin gene lkta coded for by plasmid pAAS32. The hmb gene fragment was taken from pRAP501 and starts at the codon for the third amino acid residue of ORFI. The haemin binding protein can be used in vaccines for preventing or treating H. somnus infections, which cause thromboembolic meningo-encephalitis, septicaemia, arthritis and pneumonia in

```
pr comprise sub-unit antigens from Phaemolytica finbrial protein, pr plasmin receptor, 50 k outer membrane protein and leukotoxin.

XX Disclosure; Fig 5; 92pp; English.

XX EKT352 is 98% homologous with authentic leukotoxin and migrates CC to the same position on gels.

CC The LKT352 gene was prepd. as follows: lktA, an MaeI fragment CC contg, the gene was ligated into the SmaI site of pUCl3 to form CC pAA179. From this, two constructs were made in the ptac-based CC vector, pGH432:lacl digested with SmaI. One, pAA342, consisted of CC the 5' AhaIII fragment. Clone pAA342 expressed a truncated CC the entire MaeI fragment. Clone pAA342 expressed full CC length leukotoxin at very low levels. The 3' end of the lktA gene CC pAA345 was therefore ligated to Styl/BamHI digested pAA342 to CC yield pAA352 contg. the LKT352 sequence. The protein expressed of the P. haemolytica antigens, e.g. fimbrial protein, plasmin CC receptor or 50K outer membrane protein. The vaccine with corresponding fever pneumonia.

                           Gene libraries of P. haemolytica Al (strain B122) were constructed in lambda gtl1 and pUCl3. Resulting clones were used to transform E. coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infection and that had been boosted with a conc. culture supernatant of P. haemolytica to increase anti-leukotoxin antibody levels. Positive colonies were screened for their ability to produce leukotoxin by incubating cell lysates with bovine neutrophils and measuring the release of lactate dehydrogenase from the neutrophils. A 4kb fragment was obtd. Progressively larger clones were isolated by other colonies were something the colones were something the colones were solated by the colones w

The clone was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at high levels and the other expressing the full length leukotoxin at low levels. The 3' end of the lkth gene from the full length clone was ligated to the truncated gene clone to yield plasmid pha352. The clone was used to produce chimeric proteins by gene fusion with an antigen coding sequence, e.g. the coding sequence of somatostatin, gonadotrophin releasing hormone or rotavirus viral protein 4, i.e. leukotoxin works as a carrier protein to bring about a larger immune response than the antigen alone. Immunisation with these antigens can regulate growth rate, lactation and reproductive efficiency. See also AAR34546-8.                                                                                                                                 Haemophilus somnus enriched with iron regulated proteins is new. The vaccine pref. further comprises an immunogenic leukotoxin polypeptide, esp. an immunogenic Pasteurella haemolytica leukotoxin homologous to LKT352. Example 1.2 describes the prodn. of P. haemolytica recombinant leukotoxin from pAA352.

Two expression constructs were made. One, pAA342, contained the 5'-Ahall fragment of the 1tkA gene, while the other, pAA345, contained the entire 1ktA gene. pAA342 expressed a truncated leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the 1ktA gene was ligated into pAA342, yielding plasmid pAA352. Or new leukotoxin is 98% homologous to authentic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric protein of leukotoxin and gonadotropin releasing hormone useful for, e.g. preparation of vaccines for reduction of incidenc of mammary tumours in mammals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cytotoxic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a recombinantly produced or chemically synthesised leukotoxin 352 (LKT 352)polypeptide, derived from the lktA gene that is present in the plasmid pAA352. This gene produces a truncated protein that has an estimated molecular weight of about 99 kDa and lacks the cytotoxic portion of the molecule. Thus this gene has a higher expression level than that of the full-length molecule. This can be used in the construction of a chimeric protein that comprises a leukotoxin polypeptide, several multimers, and a GNRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gonadotropin releasing horn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A chimeric protein (AAW03942) is composed of a fusion between a truncated leukotoxin (LKT-352) from Pasteurella haemolytica (see also AAW03945) and a 4-copy gondoliberin releasing hormone (GnRH) repeat sequence (see also AAW03944). It is the product of a chimeric gene (AAT37176) produced by ligating a synthetic sequence for the 4-copy GnRH into vector pAA352 (ATCC 68283), which carries the LKT-352 gene. Recombinant plasmid pCB113 (LKT 352:4 copy GnRH, ATCC 69749) was obtd. Escherichia coli transformants produced the chimeric protein, which is useful as a vaccine for fertility control, esp. immunological sterilisation of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      661
```

The present sequence represents the LKT-GnRH chimeric protein from pCB113. This plasmid contains the LKT-352 polypeptide (AAM79568) fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnR sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.

a GnRH

Chimeric protein of leukotoxin and gonadotropin releasing useful for, e.g. preparation of vaccines for reduction of of mammary tumours in mammals

hormone incidence

                                                             SUBCELLULAR LOCATION: Secreted.
DOMAIN: THE GLY-RICH REGION IS PROBABI
CALCIUM, WHICH IS REQUIRED FOR TARGET
       ACTIVITY.

DOMAIN: THE THREE TRANSMEMBRANE DOMAINS ARE BELIEVED TO BE INVOLVED IN PORE FORMATION BY THE CYTOTOXIN (BY SIMILARITY) PTM: PALMITOYLATED BY LKTC. THE TOXIN ONLY BECOMES ACTIVE WINDDIFIED (BY SIMILARITY).

SIMILARITY: BELONGS TO THE RTX PROKARYOTIC TOXIN FAMILY.

ETUNCTION: NEUROPILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M FUNCTION: NEUROPILAMENTS USUALLY CONTAIN THREE IF PROTEINS: L, M AND H WHICH ARE INVOLVED IN THE MAINTENANCE OF NEURONAL CALLEER. PTM: THERE ARE A NUMBER OF REPEATS OF THE TRIPEPTIDE K-S-P, NEW PHOSPHORYLATED ON A NUMBER OF THE SERIUES IN THIS MOTIF. IT IS THOUGHT THAT PHOSPHORYLATION OF NEW RESULTS IN THE FORMATION OF INTERFILAMENT CROSS BRIDGES THAT ARE IMPORTANT IN THE MAINTENANCE.
                                                                                              OF AXONAL CALIBER.

PTM: PHOSPHORYLATION SEEMS TO PLAY A MAJOR ROLE IN THE FOTHE LARGER NEUROFILAMENT POLYPEPTIDES (NF-M AND NF-H)
OF THE LARGER NEUROFILAMENT POLYPEPTIDES (NF-M AND NF-H)
LEVELS OF PHOSPHORYLATION BEING ALTERED DEVELOPMENTALLY
COINCIDENT WITH A CHANGE IN THE NEUROFILAMENT FUNCTION.
SIMILARITY: BELONGS TO THE INTERNEDIATE FILAMENT FAMILY.

C;Function:
A;Description: attacks cell membranes and causes cell lysis
C;Superfamily: hemolysin A; hemolysin A homology
C;Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipoprotein; tandem repeat;
F;240-786/Domain: hemolysin A homology <HLYA>
F;718-809/Region: 9-residue repeats
F;718-726/Region: repeat
F;727-735/Region: repeat
F;736-744/Region: repeat
F;745-753/Region: repeat
F;727-780/Region: repeat
F;727-780/Region: repeat
F;727-780/Region: repeat
F;727-80/Region: repeat
F;721-89/Region: repeat
F;721-89/Region: repeat
F;721-890/Region: repeat
F;556/Binding site: palmitate (Lys) (covalent) #status predicted
